A.W. Finnegan has spent years researching and dissecting the origins and evolution of biological warfare and its antigens. During his life, Adam has experienced direct results of these biological weapons which were relatively unknown to the average American until the Covid SARS 2 outbreak. Struggling to understand Lyme disease, Adam's research led him into the dark world of spy rings, sleeper agents, hidden bioweapons experiments and cover-ups by corporations, public health institutions and our own government. This book will leave you with a much broader understanding of how natural viruses were used to create horrific diseases, how these viruses were spread and how they have evolved into dangerous and deadly weapons.
